

VEENODA NTIMANI

Software Developer

Johannesburg, Diepkloof, 1864 | 0796702061 | veenoda19@gmail.com | [Veenoda | LinkedIn](#) | [Veenoda | Github](#)

PROFESSIONAL SUMMARY

Software Developer with 2.5+ years of combined professional and internship experience across the full software development life cycle (SDLC), delivering full-stack Java/Spring Boot applications within a regulated financial services environment at FNB. Skilled in producing robust, maintainable and scalable system components, applying data structures and Agile development practices, and enforcing code quality and security standards through SonarQube and peer review. Experienced in unit and system testing, CI/CD deployment pipelines, and collaborating with designers, product owners and engineering leads to refine solutions. Comfortable troubleshooting complex issues, supporting and mentoring junior team members, and continuously building technical depth in pursuit of an Advanced Diploma in Information Technology.

EDUCATION

Advanced Diploma in Information Technology

Vaal University of Technology | In Progress

Diploma in Information Technology

Vaal University of Technology | June 2023

National Senior Certificate (Matric)

Nwamavimbi Secondary School | December 2019

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Python Essentials 1
- IBM AI Foundations for Businesses
- Emerging Technologies: From Smartphones to IoT to Big Data
- IT Essentials: PC Hardware and Software

TECHNICAL SKILLS

- **LANGUAGES:** HTML5, CSS3, JavaScript, Java, Python, MySQL
- **FRAMEWORKS:** Angular, React, SpringBoot, Hibernate/JPA
- **TOOLS:** IntelliJ, VSCode, Git, GitHub, Atlassian Stack, Docker, Kubernetes, SonarQube, Jenkins, Kiro, MySQL Workbench, JBoss, Wildfly
- **ARCHITECTURE:** CI/CD & Source Control Management, Microservices architecture, Application Systems Design, RESTful API, CRUD operations, API Integration, Unit and System Testing (JUnit/Mockito)
- **AI:** SpringAI, LLM, Prompt Engineering, MCP, RAG, AI Agent, N8N, Vector Databases & Embeddings, AI-assisted Software Development, AI Workflow Automation, Kiro
- **SOFT SKILLS:** Problem Solving, Cross-functional Collaboration Critical Thinking

EXPERIENCE

Java Full-Stack Software Engineer | FNB ConnectMe IT | Gauteng, Randburg | Oct 2024 – Present

- Produced working, quality software using Java and Spring Boot to support FNB's financial service applications used by thousands of customers, ensuring designs met functional and business requirements.
- Delivered robust, fault-tolerant and re-usable system components by building responsive Angular frontends integrated with MySQL databases for seamless full-stack user experiences.
- Created and managed deployment artefacts and containerised deployments with Docker and Kubernetes, maintaining consistent, scalable environments across cloud-native infrastructure.
- Ensured supportable and maintainable code by monitoring SonarQube quality gates and participating in peer code reviews aligned with banking security standards.

- Collaborated with designers, product owners and engineering leads in an Agile/Scrum environment, using Jira for sprint planning and refining solution designs.
- Troubleshoot and resolved critical production defects, applying problem-solving skills to maintain system uptime, and shared root-cause findings with the wider team to support continuous improvement.
- Leveraged AI tools to accelerate feature delivery and improve development workflows, contributing to CI/CD pipeline improvements.

Java Full-Stack Developer Intern | Geeks4Learning | Gauteng, Revonia | Feb 2024 – Sep 2024

- Contributed to the decomposition and development of an Algotbot Trading Platform, building a robust Java/Spring Boot backend capable of processing simulated market data and trade execution logic.
- Developed unit and system test coverage alongside a dynamic Angular dashboard providing real-time visualisations of trading performance and portfolio metrics.
- Supported automated CI/CD pipelines via Jenkins and managed deployment packages to streamline releases and reduce manual deployment errors.
- Implemented containerisation with Docker, packaging the trading engine and frontend into portable, re-usable units for consistent deployment across environments.

Microsoft Azure Learnership | DynamicDNA | Gauteng, Randburg | Aug 2023 – Nov 2023

- Earned the Microsoft Certified: Azure Fundamentals (AZ-900) certification, building foundational knowledge of cloud concepts, security and governance relevant to scalable application systems.
- Gained proficiency across cloud service models (IaaS, PaaS, SaaS) and explored deployment of scalable resources via the Azure portal.
- Studied cloud-native solution delivery, focusing on optimising infrastructure costs and operational efficiency.

SELECTED PROJECTS

- [AICareerCoach](#) – A web app enabling users to track job applications and receive AI-assisted advice on tailoring resumes to specific job descriptions.
- [Veenosite](#) – A personal portfolio site showcasing full-stack development skills and project work.
- [AlgoBot](#) – A Forex trading robot utilising real-time market data and AI-driven prediction models to forecast market behaviour.
